Course Overview

The course provides an overview of the opportunities and challenges of transnational financing from public and private sources that seeks to support mitigation and adaptation investments intended to address climate change. Although there is increased and widespread commitment to taking climate action on the part of corporations, financial institutions, countries and sub-national actors, there remains a paucity of examples where a just transition has been furthered. The conditions engendered by the advent of geopolitical conflict, erosion in the credibility of transnational institutions and trade protectionism masquerading as climate action have exacerbated global differences in capacity and access to solutions. Nevertheless, the emergence of new financial mechanisms and the continued efforts at global cooperative responses have revealed potential methods to finance enhancements in mitigation and adaptation in the regions where these are most lacking. We examine current capital and trade flows and their relationship to flows of embedded carbon, methods of carbon pricing and the implementation of low-carbon pathways, with an evaluation of decentralized co-benefits that can advance sustainable development. We combine analysis of carbon accounting and financial structuring to design potential investments in example decarbonization projects which integrate additionality in mitigation and adaptation, co-benefits and poverty alleviation.

The course has the following related goals:

- Outline in detail the types of financial institutions and financing instruments at macroeconomic, enterprise and project levels that can facilitate a just transition to a low emissions and climate-resilient development path;

- Examine the UNFCCC principle of “common but differentiated responsibility and respective capabilities” in the context of the economic and technological capacities of developed and developing countries;
 - Provide a set of tools to examine investment and trade flows among developed and developing countries that can elucidate the flows of embedded carbon through global supply chains;
 - Review the possibilities for reversing in part the accumulated impact on climate justice of past capital and trade flows.
-

Who should take this course?

This course is for those who need to explore financing and implementation of investments in carbon mitigation and climate change adaptation in developing countries. Although there are no prerequisites for the course, it will be easier to absorb the material if students have already taken courses in economics or finance that have touched upon the concepts of marginal cost, carbon taxes, emissions trading systems, tariffs and trade and capital budgeting.

Learning Objectives

By the end of the course, students should to be able to:

- L1** Articulate stylized facts about GHG emissions, the flow of capital, trade and embedded carbon between and among major developed and developing countries.
- L2** Outline the econometric relationship between measures of economic growth, human well-being and energy access and the need to develop sources of well-being decoupled from continued growth in emissions.
- L3** Demonstrate an ability to differentiate between different types of climate action commitments and targets espoused by companies, countries and sub-national actors.
- L4** Compute the monetary costs of carbon reductions in a range of illustrative mitigation projects employing different technologies.
- L5** Explain the current state of carbon pricing initiatives in a range of jurisdictions around the world and the possibilities for interlinkages between them.
- L6** Compute the portfolio warming potential of collections of financial assets and explain the limitations of such metrics.

L7 Articulate examples of local co-benefits of climate action which can make mitigation and adaptation activities locally viable and financially feasible.

Readings

All the readings and resources will be made available through the Canvas course site and Columbia University Libraries.

Given the emergent nature of the field of climate finance, there is no required textbook for this course.

The content material comes from relevant journals, articles, infographics, book chapters, case studies, and videos.

Weekly Readings

Required weekly readings are organized by module in the course schedule located at the end of the syllabus. For your convenience, links to each reading are provided in the resource section of each Canvas module.

Readings

- Environmental Defense Fund. (2020). “What makes a high-quality carbon credit?” WWF. (16 pages).
- Gilbertson, T. L. (2020). Financialization of nature and climate change policy: implications for mining-impacted Afro-Colombian communities. *Community Development Journal*, 56(1), 21–38. (18 pages).
- Gillingham, K., & Stock, J. H. (2018). The Cost of Reducing Greenhouse Gas Emissions. *Journal of Economic Perspectives*, 32(4), 53–72. <https://doi.org/10.1257/jep.32.4.53> (31 pages).
- Global States and Regions Annual Disclosure Report 2020: Annex. (2020). Climate Group. (26 pages).
- Global States and Regions Annual Disclosure Report 2020. (2020). Climate Group. (19 pages).
- Gold Standard. (2015). Double Counting Guideline. Gold Standard. (11 pages).
- GPIF (2019). Analysis of Climate Change-Related Risks and Opportunities in the GPIF Portfolio.(94 pages).
- Hossain, M., Hales, R.; Sarker, T. (2018). In *Pathways to a sustainable economy: bridging the gap between Paris climate change commitments and net zero emissions*. Chapter 12. pp. 209-221. (12 pages).
- ICAP. (2021). Emissions Trading Worldwide: Status Report 2021. Berlin: International Carbon Action Partnership. (173 pages).
- ICROA. (2020). Timeline: Evolution of Voluntary Carbon Market (VCM). (1 page).

Case Studies

- Streck, C. (2020). “Who Owns REDD+? Carbon Markets, Carbon Rights and Entitlements to REDD+ Finance.” *MDPI. Forests*. (15 pages).
- Machado de Morais Junior, V.T., et. al. (2020). “Growth and survival of potential tree species for carbon-offset in degraded areas from southeast Brazil.” *Ecological Indicators*. Vol. 117. (9 pages).
- West, T., et. al. (2020). “Overstated carbon emission reductions from voluntary REDD+ projects in the Brazilian Amazon.” *PNAS*. Vol. 117. No. 39. (7 pages).
- Wettestad, J. (2020). *The Evolution of Carbon Markets: Design and Diffusion*. [*Select Case Study*]. (~10 pages).
- Hossain, M., Hales, R.; Sarker, T. (2018). In *Pathways to a sustainable economy: bridging the gap between Paris climate change commitments and net zero emissions*. Chapter 11. pp. 191-209. (18 pages).

Resources

Columbia University Information Technology

[Columbia University Information Technology \(https://cuit.columbia.edu\)](https://cuit.columbia.edu) (CUIT) provides Columbia University students, faculty and staff with central computing and communications services. Students, faculty and staff may access [University-provided and discounted software downloads](https://columbiait.onthehub.com)  [. \(https://columbiait.onthehub.com\)](https://columbiait.onthehub.com).

Columbia University Library

[Columbia's extensive library system \(https://library.columbia.edu/\)](https://library.columbia.edu/) ranks in the top five academic libraries in the nation, with many of its services and resources available online.

SPS Academic Resources

[The Office of Student Affairs \(http://sps.columbia.edu/students/student-services/academic-resources\)](http://sps.columbia.edu/students/student-services/academic-resources) provides students with academic counseling and support services such as online tutoring and career coaching.

Course Requirements (Assignments)

Your final course grade will be computed using a weighted index of numeric grades that combine performance under problem sets, written assignments, attendance and participation, the midterm exam, and the final term project. The weighted index will be scaled into a letter grade scale from F to A+ based on an expectation that a class representative of the population of Columbia masters students will receive a median grade of B+ or A-.

Specific rubrics for each assignment will be provided on the Canvas course site. General evaluation criteria is provided in each description.

Attendance & Participation — 15% of Final Grade

Regular attendance in lectures is required. Students are expected to have done the readings for each session prior to the lecture. Participation in all lectures and project activities is required. We expect your contributions to enhance the quality of the class experience for yourself and others.

Problem Sets and Written Assignments (Individual) — 25% of Final Grade

Problem sets and written assignments are contextually linked and will be completed simultaneously in relation to the corresponding subject matter. The problem sets require the application of concepts to gain insights while written assignments are reflections upon the constraints and limitations on data. Students are given one week to complete these. Please review below for further details.

These assignments will be evaluated in four general areas: Completeness, Accuracy, Relevance, and Formatting. Specific rubrics for written assignments will be provided on the Canvas course site.

Problem Sets

Students will complete four short, highly simplified, problem sets in order to crystallize the concepts and techniques used to gather and analyze statistical and economic data. Each set will be submitted via Canvas in an Excel sheet. Each problem set combines quantitative exercises with short written reflective responses to articulate the variations, levels of complexity, and insights that can be learned from available information. Weekly subject matter and learning objectives determine the context of each set. Full descriptions of the following problem sets will be outlined in detail in the Canvas course site.

Problem Set 1: Quantitative allocation of emissions reduction responsibilities

Problem Set 2: Summary analysis of Sustainable Development using quantitative SDG indicators

Problem Set 3: Analysis of the emission reduction potential of available technologies & offset possibilities

Problem Set 4: Scale of trade flows and potential impact of carbon pricing

Written Assignments

Students will write four short essays, each approximately 600-750 words. These assignments will be submitted via Canvas in a Word document. Although related to the problem sets, these assignments challenge students to reflect more on the limitations of the available quantitative data and what those limitations imply for the broader possibilities for climate finance. Full descriptions of the following written assignments will be outlined in detail in the Canvas course site.

Writing Assignment 1: The allocation of emissions reduction responsibilities

Writing Assignment 2: Summary Analysis of Sustainable Development using SDG Indicators

Writing Assignment 3: Scale of trade flows and potential impact of carbon pricing

Writing Assignment 4: Analysis of the emission reduction potential of available technologies & offset possibilities

Midterm— (30% of Final Grade)

At the end of week 9, students are given 5 days to complete a written midterm exam. The exam has the following parts:

- First, students will respond to a number of multiple choice questions drawing on the material imparted in lectures, readings and other coursework.
- Second, students will solve several higher-order quantitative problems in an Excel spreadsheet. These problems will reflect the concepts covered in weeks 1-8.
- Third, students will write an analytical essay to demonstrate the synthesis and transfer of concepts and techniques covered in previous modules. Students will select a prompt from a short list and submit a Word document with their response of approximately 1000 words, excluding references.

Term Project (Groups of 2-3 People) — 30% of Final Grade

General purpose and challenge of the final project: The project will outline a strategy and implementation plan that addresses energy access and carbon reduction objectives in the context of one or more developing countries, and also contributes to meeting the Net Zero ambitions of a developed country decision-maker.

A total of 100 points, the deliverables for the project will be submitted in a sequence of milestones. They are as follows:

Topic choice and Outline (Non-Graded)

This will consist of a group topic choice, an outline, and a group feedback meeting.

Outline - Each group will present a project outline by the end of week 8. The outline will consist of:

- The context for the energy and emissions reduction challenges faced by the chosen stakeholders
- An articulation of an implementable plan to address these challenges within a defined timeframe (up to 5 years)
- Identification of appropriate carbon markets or other mechanisms that serve to monetize the value of emissions reductions and related co-benefits
- Identification of appropriate parties and technologies needed to render the plan feasible and financially viable

Feedback Meeting - After submission of the outline, groups will schedule a feedback meeting where they will be provided the necessary guidance for the project to be successful moving forward. In addition, students will be afforded the opportunity to ask questions for clarification.

Presentation Deck (15 points)

Before presenting the final paper, students will design and submit a PowerPoint presentation slide deck. This will lay out preliminary results designed to persuade a decision maker to approve the implementation of the plan laid out in the paper. It will illustrate the plan's assumptions, the resources required, and describe the cost and benefits.

The presentation deck will be evaluated on the following criteria:

Organization 3 pts

- Investment background: introduction, context for recommendation, results appropriately interpreted, balance between elements, flow

Content 4 pts

- Clarity, relevance, accuracy, detailed coverage, statements supported by data

Illustrations, tables, graphs 8 pts

- Emissions chart, quality of other charts, relevance, number

Recording (25 points)

Students will record a persuasive presentation of their slide deck. The recording will be a maximum length of 12 minutes, and students must choose and define their roles for evenly distributed work. Everyone in the course will view these presentations before the final class Q&A session. The Q&A session is an opportunity to inform the final changes to the project paper.

The presentation recording will be evaluated on the following criteria:

Organization 3 pts

- Investment background: introduction, context for recommendation, results appropriately interpreted, balance between elements, flow

Content 5 pts

- Clarity, relevance, accuracy, detailed coverage, statements supported by data

Illustrations, tables, graphs 3 pts

- Emissions chart, quality of other charts, relevance, number

Presentation/Delivery 5 pts

- Language, confidence, eye contact, movement/gestures

Questions & Answers 6 pts

- Quality and depth of responses to peer questions

Timing 3pts

- Pacing and length, between 10-15 minutes, depends on the number of students

Written Paper (35 points)

Each group will submit a feasibility report detailing the technical and financial viability of the project. This includes an Executive Summary, a Technical and Operations Plan, a Financing Plan, and a Timeline and Milestone Calendar. The paper will utilize concepts developed throughout the class, especially those synthesized in weeks 11 & 12. The paper will be a length of 10 pages maximum (excluding appendices). This will be the final project submission.

The written paper will be evaluated on the following criteria:

Organization 6 pts

- Investment background: introduction, context for recommendation, results appropriately interpreted, balance between elements, flow

Content 17 pts

- Clarity, relevance, accuracy, detailed coverage, statements supported by data

Illustrations, tables, graphs 9 pts

- Emissions chart, quality of other charts, relevance, number

Formatting 3 pts

- Language, clarity, style, works cited

Excel Sheet (25 points)

An Excel spreadsheet detailing technical, operations and financing assumptions, relationships and scenarios for the planned strategy will be submitted with the final paper.

The project Excel sheet will be evaluated on the following criteria:

Comprehensiveness 7 pts

- Appropriateness and completeness of tabs, documentation of sourcing

Accuracy 10 pts

- Use of correct formulae within-cells and cross-tab referencing

Relevance 3 pts

- Link between analysis and arguments made in presentation/paper

Formatting 5 pts

- Clarity in location and content of tabs, sub-sections, numerical formatting

Evaluation / Grading

The final course grade will be computed using a weighted index of numeric grades that combine performance under problem sets, attendance and participation, midterm exam, problem sets & written assignments, and the term project. The weighted index will be scaled into a letter grade scale from F to A+ based on an expectation that a class representative of the population of Columbia masters students will receive a median grade of B+ or A-.

The final grade will be calculated as described below:

GRADE CALCULATION

ASSIGNMENT	WEIGHT
Attendance & Participation (Individual)	15%
Problem Sets & Written Assignments (Individual)	25%
Midterm (Individual)	30%

Final Term Project (Group)**30%****FINAL GRADING SCALE**

GRADE	PERCENTAGE
A+	98–100 %
A	93–97.9 %
A-	90–92.9 %
B+	87–89.9%
B	83–86.9 %
B-	80–82.9 %
C+	77–79.9 %
C	73–76.9 %
C-	70–72.9 %
D	60–69.9 %
F	59.9 % and below

Course Policies

Participation and Attendance

Regular attendance in lectures is required. Students are expected to have done the readings for each session prior to the lecture.

Participation in all lectures and project activities is required. We expect your contributions to enhance the quality of the class experience for yourself and others. This involves making relevant, useful and non-obvious comments, or posing pertinent questions, in clear and succinct language. During the lectures, come prepared to answer impromptu questions about the readings and course assignments.

Late Work

All assignments must be submitted on the published due dates. In the absence of well-documented extenuating circumstances, I will deduct 10 points from the assignment grade score for each day that you are late in submission.

Citation & Submission

All written assignments must use **APA**, cite sources, and be submitted to the course website (not via email).

School Policies

Copyright Policy

Please note—Due to copyright restrictions, online access to this material is limited to instructors and students currently registered for this course. Please be advised that by clicking the link to the electronic materials in this course, you have read and accept the following:

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

Academic Integrity

Columbia University expects its students to act with honesty and propriety at all times and to respect the rights of others. It is fundamental University policy that academic dishonesty in any guise or personal conduct of any sort that disrupts the life of the

University or denigrates or endangers members of the University community is unacceptable and will be dealt with severely. It is essential to the academic integrity and vitality of this community that individuals do their own work and properly acknowledge the circumstances, ideas, sources, and assistance upon which that work is based. Academic honesty in class assignments and exams is expected of all students at all times.

SPS holds each member of its community responsible for understanding and abiding by the [SPS Academic Integrity and Community Standards \(http://sps.columbia.edu/students/student-services/academic-integrity-community-standards\)](http://sps.columbia.edu/students/student-services/academic-integrity-community-standards). You are required to read these standards within the first few days of class. Ignorance of the School's policy concerning academic dishonesty shall not be a defense in any disciplinary proceedings.

Accessibility

Columbia is committed to providing equal access to qualified students with documented disabilities. A student's disability status and reasonable accommodations are individually determined based upon disability documentation and related information gathered through the intake process. For more information regarding this service, please visit the [University's Health Services website \(https://health.columbia.edu/content/disability-services\)](https://health.columbia.edu/content/disability-services).

Class Recordings

All or portions of the class may be recorded at the discretion of the Instructor to support your learning. At any point, the Instructor has the right to discontinue the recording if it is deemed to be obstructive to the learning process.

If the recording is posted, it is considered confidential and it is not acceptable to share the recording outside the purview of the faculty member and registered class.
